

Photographing requirements when loading cargo

Six kinds of photos should be taken under a horizontal view angle during the encasement process. The photo template is as follows,

1. Empty container photo, including back wall, floor, container number, and door frame, such as the following picture,

(1)

2. Half container photo with container number, floor, and door frame, the picture taken when the container is half loaded, such as the following picture,

(2)

3.Full container photo, the picture taken when the container is full loaded, such as the following picture,

(3)

4.Photo that can clearly reflect the status of cargo reinforcement, such as the following picture,

(4)

5.Photo of left side door opened and right side door closed after encasement, including container number, such as the following picture,

(5)

6.Photo after the door is closed and sealed, including the lead seal photo. The correct sealing position is in the left handle of the right door when facing the door, such as the following picture. Note: Do not seal the lead in any other place.
